Stripe Marking

This system places continuous or dashed stripes on a web to indicate web orientation or product type.

Product alignment or product type identification is critical to many customers, especially when similar material types or grades make visual identification difficult or impossible. A Monarch Stripe Marking System creates continuous or dashed marks for the entire length of a product to indicate product type or a unique characteristic of the material. Marks can represent a specific material grade used in a multi-ply product, filter media orientation, or indicate the coated or uncoated surface of a material. Various marking colors available in the Monarch system can also be used to uniquely identify multiple products on the same manufacturing line.

Mark Visible on the edge or down lanes of the material.

Improve Quality and Efficiency

- Providing clear indications of product orientation to downstream processes and end users.
- Not processing a web in the wrong orientation or position in a multilayer product.
- Marking automatically and continuously instead of making marks by hand.
- Reducing time spent determining correct roll orientation while processing.

Create a safer work Environment by…

- Reducing the reloading of incorrectly oriented rolls on a converting line
